FOR IMMEDIATE RELEASE

OTI Announces Update of OptionPower for Office 2010

Option Technologies Certifies OptionPower 3.2 for Office 2010

ORLANDO, FLORIDA – December, 2010 – Option Technologies Interactive, LLC, a leading provider of audience response systems, today announced the release of OptionPower® 3.2 for Office 2010, an add-in software application that makes Microsoft PowerPoint® interactive. If you can use MS PowerPoint®, then you can use OptionPower®'s software to increase your audience participation and recall. “Because of our newest update, you can use the MS PowerPoint® menu to drive your interactive presentation in any version of Microsoft Windows or Office; XP, Vista, 2003, 2007 and 2010. “ said Mark Fite, President of Option Technologies Interactive. “It is incredibly reliable, fast and secure as it manipulates your audience response data in our back-end SQL database storage. It is easy to learn, and provides powerful and compelling information...immediately,” Fite continued.

OptionPower® for Office® 2010 is a fully- integrated add-in for Microsoft PowerPoint® that allows users to quickly turn slideshows into dynamic, interactive presentations. This increases the audience interactivity because their input is recognized, immediately! Key capabilities of this newest update include: a Comparative Data Function, Hardware Wizard, support for various keypad hardware platforms, and their updating their very popular PowerPoint® add-in modules. Option Technologies add-in modules include: Council Voting, Decision Support, and a Group Competition Module, which is used for Group Training and Meeting games. With this release, all of the functionality of OptionPower® is now available to users of Microsoft PowerPoint® 2010.

This software is available for both new and existing clients that have an OTI maintenance program. It is available by download or on CD.
